

DESCRIPTION:

Western Colloid **WCP-HS** (Heavy Soft) (Tietex T272 or Equal) is a 3 once stitchbonded style polyester fabric used in the reinforcement of cold process roofing systems. It is also used as a flashing reinforcement with mastics and elastomerics. **WCP-HS** has superior strength and elongation making it an excellent reinforcement for water base cold process and maintenance roof systems. In narrow widths it is used as a reinforcement in elastomeric metal roof systems.

WCP-HS is a medium-soft product. It will provide good conformability on smooth or semi-smooth surfaces such as cap sheet, smooth surface and filled or spudded gravel. **WCP-HS** style has a close knit which may require light brooming to insure good embedment and removal of any air pockets.

WCP-HS is available in:

10 square rolls	(40" x 324')
4 inch rolls	(4" x 300")
6 inch rolls	(6" x 300")
12 inch rolls	(12" x 300")
18 inch rolls	(18" x 300")

PROPERTIES:

Weight		3 once sq. yd. 100 gram sq. meter
Thickness		.025 in.
Tensile avg.	ASTM D 1682	57. lbs**
Elongation	ASTM D 1682	61%**
Burst Strength	ASTM D 3786	176. lbs.
Trapezoid Tear Strength	ASTM D 1117	16. lbs**

**Average machine and cross machine direction.
