#9000 Roof Wash & Prime

Use For:

- Formulated For Cleaning Dirt And Grease From Roof Surfaces
- Ideal For Removing Oxidation And Contaminants
- Specially Formulated For Cleaning EPDM Prior To Re-Coating
- Use On Most Roof Surfaces

#9000 lifts dirt and grease from the surface of the roof. #9000 is formulated from surfactants and alkaline cleaning agents. #9000 also aids in the adhesion of acrylic coatings to oxidized surfaces. It is designed for use on asphalt, modified bitumen, metal and single ply roofs. (Including TPO, PVC, Hypalon and EPDM). Especially important to clean EPDM with #9000 prior to coating with ElastaHyde acrylic coating.

Directions For Use

Mix one part #9000 with four parts water. Over or under dilution will affect performance. Apply with a garden type sprayer in sufficient quantity so as to wet out the surface for a minimum of 15 minutes without drying. The primer should then be thoroughly power washed from the roof, a final clean water rinse is recommended. Although all efforts have been made to reduce the effect, this product will cause the roof surface to become more slippery. All necessary precautions should be taken by the applicator to avoid injury.

READ AND FOLLOW DIRECTIONS CAREFULLY
- Refer to latest SDS sheet for proper handling.
