

**Surprised By Wet Weather?  
We Have A “Cure” For That.**

**Now Introducing 720 & 790 QS**  
**Western Colloid’s New Quick Set Formulation**

# Western Colloid Now Offers Two Of It's ElastaHyde Products In a QS – Quick Set Formulation.

#720 ARC ElastaHyde Acrylic Elastomeric Reflective Coating and #790 AFC Premium Grade Elastomeric Reflective Coating are now available as QS

This special formulation aids in the application of ElastaHyde when it does not have the proper time to completely dry due to damp, wet, or rainy weather. ElastaHyde QS will set up rapidly, within 15-20 minutes, and resist moisture in the form of dew, fog, or even heavy rain. Once set up, it will not wash off or dilute. By quick setting, the product becomes very firm and stable, but it is not completely dry and must be allowed to cure as normal.

**Our New QS – Quick Set Formulation is Made To Order Only.**

**Note:** Please read technical data sheet instructions for proper handling before use. When we say rapid set-up we mean it!

**Please contact your Representative today for more information and how to order.**

**Western COLLOID**  
LAYERS OF EXPERIENCE & QUALITY for 40 YEARS

**720 ARC ElastaHyde-White**
