RE: Stone Tower roof restoration with Western Colloid products.

Dear Mr. Thurston,

We recently completed the Stone Tower office building in Dallas Texas with your Western Colloid re-enforced liquid roofing system and would like to thank you and the Western Colloid Team, for a very successful project.

This building is an eleven-story glass office tower and we had no way of attaching trash shuts or any other device to the side off the office tower. With Western Colloids re-enforced liquid applied roof systems, we were able to refurbish the existing BUR with gravel. The top floor of this building has a radio station as an occupant and with your system, we were able to complete the roof above their live broadcast rooms without a single disruption to the occupants. This was a major concern for the building owners and the Western Colloid re-enforced liquid system performed as expected and was installed just as was promised.

Here at BEAM Professionals, we are glad we were introduced to Western Colloid and intend to evaluate our clients roofing needs and recommend Western Colloids products wherever we see a need.

Sincerely,

A handwritten signature in black ink that reads "Harold Stephens". The signature is written in a cursive, flowing style.
