# WHEN YOU KNOW – YOU KNOW

**NOW WITH THE VERSATILITY OF 298 X YOU CAN ACHIEVE AN EVEN SMOOTHER SURFACE ON A ROOF INSTALLATION.**

- **298 X** aids in the restoration of gravel roofs and ponding areas.
- **298 X** contains a proprietary fire-resistant filler that increases the volume solids of the emulsion, making it much more effective as a fill coat over rough surfaces and for higher build in areas that have ponding.
- **298 X** has a special light-weight component added to the standard 298 Asphalt Emulsion to maintain volume after drying. The increased volume lessens the shrinkage when used as a fill coat over gravel or ponding areas after evaporation.
- **298 X** converts the asphalt emulsion into a high-volume solids product.

**USE FOR CRICKETS & PONDS**
